

Scenario for the Study Center System

The study center system is created to help students organize their activities and events more effectively. It supports different types of users, such as students, staff, and administrators.

1. **Users** log in with their username and password to access the homepage, which shows news, event details, and basic information.
2. **Booking Spaces:** Students can reserve study rooms or spaces for group or individual study. The system shows available times for easy booking. (solo desk, individual room, team booth, meeting room, lecture/training room)
3. **Events & Workshops:** Students can register for workshops and events organized by the study center. They can see a list of upcoming events and sign up for them directly through the platform.
4. **Contact Details:** Users can visit the contact page to find key contact information, including phone numbers, location and email addresses for different departments or staff members.

The system is designed to be easy to use, so everyone can book facilities, register for events, and find information without difficulty.

To let users create accounts and log in, you need to set up a registration and login system on your website's main (welcome) page.

1. **Registration Form:** Add a form for new users to sign up. It should ask for details like name, email, password, age, gender, interests.
2. **Login Form:** Provide a form for users to log in with their email and password.
3. **Access Control:** After login, send users to a dashboard or homepage and ensure only logged-in users can access certain pages.

Staff information: includes their full name, email, national number, phone number, age, gender and educational qualifications.
